Orfitrans PETG

The clear appearance lets the prosthetist/orthotist verify the conformity of the device prior to final fabrication and after setting. The product has superior impact resistance and is exceptionally durable in handling, drilling, sanding, buffing, cutting and re-forming making its clinical application and adjustment effortless for clinicians.

Recommended application

Prostheses or orthoses for short-term, supervised, in-office test fittings

Orfitrans Stiff

Orfitrans Stiff is the Gold Standard for check sockets. The material is virtually indestructible, yet easy to drill into or modify. The socket will remain transparent with a slight blue tint that allows the limb to remain visible.

Recommended application

Prosthetic test sockets for long-term test applications.

Orfitrans Excel

8% lighter than competitive EVA-type products, resulting in increased patient comfort. The material's self-bonding capabilities make it capable of all fabrication techniques for both orthoses and prostheses.

Recommended application

Inner prosthetic sockets, hand and wrist orthoses, and as a lining material in ankle orthoses.

Orfitrans Extra Soft

Highly flexible, very stable product that is extra soft and smooth for added patient comfort.

Recommended application

Inner prosthetic sockets for very active amputees.

Orfitrans Extra Soft Silicone

Extra soft, smooth material with the most silky surface of all Orfitrans products. Thanks to the silicone, this product prevents the need for powder on the inside and it eliminates all the difficulties and inconveniences often experienced in donning and doffing other socket materials.

Recommended application

Inner prosthetic sockets for very active amputees.
