For more than 25 years, Orfit has been providing solutions for immobilizing patients in radiation oncology.

Based on an in-depth knowledge of the worldwide market, our team of engineers and product designers has developed optimal solutions that correspond with the requirements of ever increasing precision in radiation therapy.

Orfit products and our market support are destined to offer you an important added value in your daily clinical practice where assuring a comfortable, reproducible and highly precise position of the patient is of critical importance.

Our thermoplastic masks and hardware form a complete range of high quality immobilization and positioning products for all conventional radiation therapy procedures as well as for IMRT, IGRT, hypofractionated RT, SRT, SRS, proton and other high energy therapy systems.

Today, no other company in this highly specialized market masters the full cycle of requirements that lead to innovative and highly functional products.

At Orfit, we achieve this because we control the entire process of Research & Development, Manufacturing, Quality Assurance, Marketing & Sales and Customer Education. Thanks to this process, we offer optimal solutions for patient positioning and immobilization, everywhere in the world.

Our R&D and manufacturing activities result in a product offering for radiation oncology that consists of especially formulated thermoplastic materials for patient immobilization, and high precision hardware for accurate and comfortable positioning on treatment couches and diagnostic machines.

We bring innovation into the market, with a clear understanding of the needs of Radiation Therapy Specialists, the patient’s comfort and the requirements of the authorities.

Discover the patient-centric solutions from Orfit
Antibacterial coating

All Orfit masks are treated with a water-based non-stick coating that has antibacterial properties and that prevents sticking of the mask to skin, hair and hardware.

The antibacterial effect of the coating was determined using the ISO 22196:2011 test method. The results show a reduction of > 99.99% of the following bacteria:

- Methicillin-Resistant Staphylococcus aureus (MRSA)
- Staphylococcus aureus
- Escherichia coli
- Vancomycin-Resistant Enterococci (VRE)

MRSA, the so-called hospital bacteria, is the most common nosocomial infection in Europe. It is estimated that over 170,000 MRSA infections in Europe result in 5000 deceases every year. The department of Health and Human Services in the USA estimated 94,360 invasive MRSA infections in 2008, associated with 18,650 deaths each year.

The WHO considers the Escherichia coli as a “super bacteria” because it is increasingly resistant to antibiotics.

Hand hygiene helps to prevent infections but it is not sufficient. Therefore a thorough hygienic care of the patient and of medical devices is of prime importance to prevent contamination. The antibacterial coating on all Orfit masks helps to reduce cross-contamination within a radiotherapy department.

# DOSIMETRIC CHART

# PRODUCT INFORMATION AND EDUCATION
Today’s imaging and target localization possibilities allow you to see how your treatment plan corresponds with the location of the tumor. Based on this, corrections for better sparing of healthy tissue can be made. These innovative techniques can only be efficient if you are sure that your patient does not move during the delivery of the fraction.

The Patient Immobilization Systems from Orfit are an active component in achieving a high quality radiation therapy.

The unique features of our thermoplastic materials, in combination with our Head Supports with cranial stop and our L-profiles that fix the masks in the High Precision Hardware give you the possibility of choosing the most suitable mask for your patient and for the type of treatment that you have planned.

Thanks to a unique combination of advanced materials and innovative production methods, the Orfit system has achieved three critical goals for improving the quality of radiation therapy treatment:
PRECISION/ACCURACY
Limit patient movement

Overall Efficast mask stability limits patient displacement to less than 2 mm within the mask and approximately 1 mm when using Hybrid masks.

Low-stretch draping provides greater contouring and rigidity.

L-profile technology secures more of the mask to the base plate.

REPRODUCIBILITY
Reduce daily shifts

3D Head Supports with cranial back stop that cradle the patient’s head.

Well-defined and indexable thermoplastic masks insure consistent daily positioning.

Openings at the cranial end of the mask provide space for patients with long hair.

PATIENT COMFORT
Increase acceptance

Antibacterial non-stick coating with soft surface feel.

Comfortable foam head supports.

Thermoplastic material with engineered limited shrinkage.

Remold a mask when the patient’s volume has increased or decreased.

Cool activation temperature of 65°-70°C [149°F - 158°F].

The antibacterial coating helps in reducing the spread of harmful microbes in a hospital environment.
A unique combination of high precision immobilization, ease of molding, safety and patient comfort

Our engineering and production capabilities with proprietary thermoplastic formulations result in the best mask materials available. Stretch and shrinkage properties are always the same and assure a reliable mask molding technique, resulting in a perfect fit around the patient’s anatomy and a high degree of patient comfort.

Orfit engineers developed a patented method (BE1015081) to measure the relationship between mask contraction and fixation force. The Orfit range of products allows for a perfect balance between patient comfort and restriction of movement.

Both mask contraction and fixation force are a measure for precision, stability and comfort of patient immobilization in radiation therapy.

Dr. Bogdan Bogdanov

STABILITY OF DIFFERENT IMMOBILIZATION MASKS FROM ORFIT INDUSTRIES

Horizontal displacement of different mask types. Measurements are based on applying a lateral force of 100N on a dummy head that is immobilized with each mask.
Meet specific patient requirements

An extensive range of Orfit masks is available to meet specific patient requirements and your immobilization preferences.

- Chin only
- Head only
- Head and neck (with neck flap)
- Head, neck and shoulders
- Head, neck and shoulders with cranial flap
- Hybrid masks of all types for significantly increased precision of the immobilization and for use with large patients
- Open Face Hybrid mask
- Pediatric masks - All configurations for head, neck and shoulders.

Orfit masks are available with various combinations of prepunched cutouts for ease of use.

- Nose only
- Nose and mouth
- Nose, eyes and mouth

All Orfit masks have an antibacterial, non-stick coating.
A number of clinical studies have proven the effectiveness of Efficast in combination with Raycast High Precision Hardware.

**CLINICAL STUDIES**

Fuss, M. (2004), Repositioning accuracy of a commercially available thermoplastic mask system, Radiotherapy and Oncology, 71 (3), 339-345

Li (2013), Migration from a full head mask to open-face mask for immobilization of patients with head and neck cancer, JACMP, 14 (S), 243-54

Ouzidane, M. (2013), Spine stereotactic body radiotherapy - Experience from Cleveland Clinic, Applied Radiation Oncology, 2(2), 12-16
The Patient Immobilization Systems from Orfit are an active component in achieving a high quality radiation therapy.

Thermoplastics with superior molding properties that result in a high but comfortable degree of patient immobilization.

Very stable mask preventing chin-drop and shoulder rotation.

Memory effect which allows the user to remold a finished mask as needed. This provides significant flexibility for modification during a patient treatment or simply to save on waste.

Thinner masks resulting in less absorption and increased skin sparing.

Positioning blocks and wedges that effectively support different neck shapes and allow flexion and extension of the head.

Quick release system allows for fast and safe removal of the mask from the patient.

HIGH PRECISION ANTIBACTERIAL MASKS

NANOR® SINGLE LAYER

Blending nanoparticles in our thermoplastic material substantially improves the mechanical properties of the immobilization mask.

A thin, yet strong mask
Fits around the patient like a surgical glove
Lower pressure on the patient’s face
Adapts to minor patient swelling

www.orfit.com/nanor for more information.
HIGH PRECISION ANTIBACTERIAL MASKS

HYBRID

Precision has always been, and will always be, the main driving force in radiation oncology for improving existing treatment techniques and for adopting changes resulting from new techniques.

The search for improvement of the overall precision of cancer treatment has led to the introduction of techniques like SRS, SRT, IGRT, Adaptive RT, real time robotic techniques, etc. It has also led to a better understanding of the importance of an accurate and sustainable patient positioning system.

Very often, standard immobilization devices will not deliver the precision and reproducibility needed for these treatments as they leave too much room for the patients to move. A stereotactic treatment for example requires millimeter precision immobilization.

Orfit has created an innovative and patented range of hybrid thermoplastic immobilization masks that clearly overcome the above-mentioned positioning and immobilization problems.

Even the largest and biggest-shouldered patients will be immobilized properly with these masks thanks to the reinforcement rim around the mask and the chin strap offering excellent control over the position of the patient’s head.

The reinforcement rim in the mask is made from Nanor thermoplastic material. This ultra-thin material [1.2 mm thick] improves the stability of the mask dramatically, while maintaining the comfort. The use of nanotechnology allows the production of a material that has a high bending modulus with a limited thickness. Additionally the material has a limited shrinkage.

The range of hybrid pre-cuts consists of a 3-points head pre-cut and a 4-points and 5-points head, neck and shoulders pre-cut.

These reinforced thermoplastic masks offer the ease of use of a regular thermoplastic mask with an unparalleled horizontal stability and fixation force.

In combination with the unique Orfit High Precision Head Supports, one is able to really achieve a good immobilization and positioning of the patient.
HIGH PRECISION ANTIBACTERIAL MASKS

HYBRID

Nanor-reinforced thermoplastic masks are thinner and lighter with excellent stability and patient comfort.
HIGH PRECISION ANTIBACTERIAL MASKS

OPEN FACE HYBRID

The innovative Open Face Hybrid mask leaves eyes, nose and mouth exposed, and is the ideal immobilization solution for brain, head and neck patients who suffer from claustrophobia and for treatments with a long duration, as on the Cyberknife. Like all thermoplastic materials made by Orfit, this high precision mask is easy to mold and it can be shaped very closely to the patient’s anatomy.

It provides excellent reproducibility of the patient’s position. It warrants increased patient comfort and provides the same high precision immobilization as the standard single layer Efficast head and neck masks.

The Open Face Hybrid mask is reinforced with Nanor, an innovative thermoplastic material, based on high end nanotechnology, that allows to make a mask that is thinner, lighter and yet stable.

The new open face mask is compatible with modern motion management systems, enabling radiation oncology clinicians to keep the target in the path of the radiation beam at all times.

The 3-points Open Face Hybrid Head mask has been evaluated and confirmed by Vision RT as compatible for use with Vision RT products*

www.visionrt.com
Orfit’s lightweight, professionally designed and precisely engineered hardware ensures outstanding patient immobilization results. The Orfit Base Plate design consists of a sandwich construction, with a foam core and ultra thin carbon fiber layers.

This results in a very low density with the highest possible radiation transmission during treatment. The use of your existing 2-pin lock bar, Orfit Loxon clamps or a similar device ensures that the Orfit High Precision Base Plate is securely mounted to the table top.

Positioning indicators on the base plate help to reduce patient setup time and ensure precise positioning and immobilization during each fraction.

An extensive range of Orfit High Precision Base Plates and Extensions are available and compatible for use with all treatment machines, CT and simulator table tops.

An extremely important part of the Orfit High Precision Frameless Mask System is the innovative 3D Head Support with cranial stop.

The shape helps to comfortably cradle the patient’s head while the cranial stop allows a correct and reproducible position within the head support. You can now be sure that the patient is in the exact same position within the head support each and every time. The base of the head support indexes precisely into the Orfit High Precision Base Plates.

Several sets with differently shaped and sized supine and prone head supports are available to meet virtually every patient and treatment need.

Movable chin cushion
THERMOFIT
PERSONALIZED HEAD SUPPORT

Thermofit is an innovative thermoplastic solution for the creation of a personalized head support. Thermofit becomes soft and moldable after heating. It is placed in an Orfit Head Support before positioning the head of the patient. While Thermofit cools down and becomes rigid, it takes on the exact curvature of the head and neck of the patient.

In a second step a thermoplastic mask is molded over the patient. In combination with Thermofit it creates an immobilization device that is suitable for high precision treatment.

Thermofit comes in three different sizes.
THERMOFIT PERSONALIZED HEAD SUPPORT

Thermofit has a number of characteristics that make it easy to apply in a radiotherapy department:

Can be used on standard Orfit immobilization devices. No need for additional equipment.

Extremely comfortable for a patient thanks to the support it gives in the neck area.

Works fast. Heating a Thermofit only takes a few minutes and the hardening time is similar to the hardening time of a thermoplastic mask.

Extremely easy to use.

Excellent dosimmetrical properties with a low attenuation percentage.

Thermofit is odorless and has unlimited shelf life.

Art. N° 32390
Thermofit
13.5 x 30 cm

Art. N° 32391

Art. N° 32406/10 (for Thermofit 32392)
Waterproof bags for Thermofit (package of 10 pieces)
Orfit Blocks and Wedges are used in conjunction with our Head Supports to increase high precision positioning. This combination provides you with unmatched flexibility and versatility in being able to quickly and easily achieve the specific patient position you require for treatment.

**FEATURES AND BENEFITS**

You are able to comfortably position the patient in extreme flexion and extension.

Orfit High Precision 3D Head Supports with cranial stop and Blocks and Wedges are compatible for use with all High Precision Hardware.

All components index to each other for increased stability, reproducibility and precision of the immobilization.

The Orfit Arm Strap allows the patient to hold their arms in a comfortable position by the side of their body. It requires no effort from their side. It is the ideal solution for patients with paralysis, patients that cannot lie still, large patients that cannot position their arms on the table, etc. Increased comfort for the patient results in decreased motion, better image quality and a more accurate treatment result. The Arm Strap is one-size-fits all thanks to the velcro that allows you to adjust the strap to the patient’s anatomy.

Another option for the arms is the Shoulder Positioning System, which allows pulling down the shoulders of the patient. This is helpful when molding a 5-points head, neck and shoulders mask.
The Base Plate Extension can be placed at the caudal edge of a head, neck and shoulders base plate to improve the comfort at the level of the shoulders. It bridges the gap between the table and the base plate.

PUSH-PIN IMMOBILIZATION SYSTEMS

At Orfit we are dedicated to provide the best possible solutions for patient positioning and immobilization in radiation oncology.

The most important component of patient immobilization is the thermoplastic mask. The superior properties of Orfit thermoplastic pre-cuts assure an easy, comfortable and precise mask-making process.

Our thermoplastic masks with push-pin type profiles fit seamlessly on existing hardware that you may have in your department.

Superior patient immobilization with Orfit thermoplastic masks

ANTIBACTERIAL MASKS

HEAD, NECK AND SHOULDERS | PUSH-PIN
Precision in lung treatment is highly increased by immobilizing the chin and thorax of the patient.

Orfit has designed a hybrid 4-points mask that assures a correct repositioning of the chin, the arms and the chest.

The reinforced part of the mask over the armpit and over the lower ribs prevents rotation of the thorax.
PUSH-PIN BASE PLATE

BASE PLATE

HIGH PRECISION PEDIATRIC BASE PLATES

Orfit’s lightweight and precisely engineered Pediatric Hardware ensures outstanding immobilization results. The Orfit Pediatric Base Plate design consists of a sandwich construction, with a foam core and ultra thin carbon fiber layer. This results in a very low density with the highest possible radiation transmission during treatment.

The use of your existing 2-pin lock bar, Orfit Loxon clamps or a similar device ensures that the Orfit Pediatric High Precision Base Plate is securely mounted to the table top. Positioning indicators on the base plate help to reduce patient setup time and ensure precise positioning and immobilization during each fraction.

**UON® AND DUON®**

**U/S-shaped frame**
UON and DUON head and neck masks and DUON head, neck and shoulders masks combine the unique features of U-Plast thermoplastic material with a strong U- and S-Shaped frame with an improved bending stiffness. This results in a more sturdy mask.

**T-shaped pins**
T-shaped pins in DUON masks are easy to attach to and release from a base plate. The T-shaped pins are available as a separate item and can easily be replaced when necessary.

**Antibacterial, non-stick coating**
Each mask is treated with a water-based non-stick coating with antibacterial properties. The coating prevents sticking of the mask to skin, hair and hardware and its antibacterial properties prevent cross-contamination in a hospital environment.

**Thermoplastic properties**
UON and DUON masks offer a high and reliable quality with controlled low shrinkage. This results in high accuracy, ease of use and increased patient throughput.

Orfit’s HP PRO Solution achieves a new level in patient immobilization.

This immobilization device is designed for brain, head and neck treatments for both photon and proton therapy. It is the first immobilization device in the market that makes use of ultra-thin Nanor masks.

The Orfit HP PRO Solution has been designed to meet the specific standards proton therapy demands. It includes a homogeneous low density immobilization device with a narrow carbon fiber base plate in the head and neck area, allowing for closer range positions of the treatment device. The base plate is a lightweight structure with good dosimetric properties.
**HP PRO® ANTIBACTERIAL MASKS**

Orfit provides thermoplastic head masks and head, neck and shoulder masks that are molded over the patient and securely and easily fastened to the base plate.

The thermoplastic masks contribute to maximal immobilization. Comfort and stability are guaranteed by the use of Orfit’s Nanor thermoplastic material. Nanor is a thin thermoplastic material that makes use of nanotechnology to improve the mechanical properties of the thermoplastic material.

The masks are unique thanks to their patented locking mechanism.

The mask profile slides over a locking pin and then swivels towards the base plate until it clicks securely into the base plate. It is easily unlocked so that the mask can be removed quickly.

MRI COMPATIBLE PRODUCTS

Orfit’s range of MRI compatible immobilization devices allows a reproducible setup for each patient, both during simulation and treatment. The devices can be used in the MRI scanner and on the MRI Linac. The product range contains high density head and neck base plates for the most common MRI scanners in the market: Siemens, Philips and GE. They allow the setup of the coils in the most optimal position to obtain a good image quality. For the MRI Linac, there are low density versions of the head and neck base plates available.

The Orfit SBRT Solution is also entirely MRI compatible. It consists out of a fiber glass base plate, which is low density, and non-metallic accessories.

All Orfit thermoplastic masks are MR safe.

ORFIT MRI-P AND ORFIT MRI-G SOLUTION FOR BRAIN, HEAD AND NECK

The Orfit MRI-P Solution is designed for Philips MRI Scanners and the Orfit MRI-G Solution for GE MRI Scanners.

Both solutions can be combined with the flexible coils of the respective MRI scanners. The base plates allow the use of a thermoplastic mask, head supports and blocks and wedges in order to scan the patient in the exact treatment position.

The solution includes a High Precision (HP) Base Plate, a set of six HP Low Density Head Supports and a set of Couch Top Fixations.
The Orfit MRI-S Solution for brain, head and neck provides patient immobilization on the Siemens MAGNETOM family of MRI scanners. It allows for fusion of images with the patient in exactly the same position as during simulation and treatment.

The solution includes a High Precision (HP) Base Plate, a Bi-lateral Antenna Holder, a set of six HP Head Supports, and a set of Couch Top Fixations. Patients are immobilized with an Efficast thermoplastic 3-points or 5-points mask.

All components and thermoplastic masks are MRI-compatible and meet the standards of Siemens AG Healthcare with respect to functioning on the following Magnetic Resonance Systems.

### HP base plate

The HP base plate comes with different sets of dedicated indexing fixations so that it can be mounted on top of the different couch tops of the Siemens MAGNETOM family of MRI scanners.

Slots are provided in the base plate to attach Orfit high precision thermoplastic head and neck masks. All Orfit HP Head Supports, Blocks and Wedges can also be positioned on the base plate. This allows the patient to be immobilized in exactly the same position as for simulation and treatment.

### Bi-lateral antenna holder

The antenna holder slides over the cranial end of the base plate. It can be opened for easy mounting of the antennas and for patient setup with a mask. In a closed position the antennas are very close to the head of the patient for optimal image quality. The levers of the holder accept the large flex coils of the Siemens MRI system.

THE AIO SOLUTION®
ALL-IN-ONE PATIENT POSITIONING SYSTEM

NEW THIRD GENERATION AIO SOLUTION

The AIO Solution facilitates and refines treatments by limiting potential changes in the patient position to a minimum.

With one base plate and different sets of cushions and thermoplastic masks, all parts of the body are positioned and immobilized in a comfortable, exact and reproducible way.

These refined immobilization techniques allow IMRT and IGRT procedures in almost any anatomical location, including breast and lung.

Prone breast board (yellow cushions) and belly- and pelvic board cushion sets (green cushions) are under development.

All information on www.orfit.com/aio
Daily patient setup made easy
Position of the cushions is easily reproduced during each fraction. Comprehensive color coding facilitates the use of the cushion combinations.

Make patient comfort a priority
Minimal pressure points and soft, ergonomically designed cushions.

Made to last
A busy radiation therapy department requires high durability devices to withstand rough handling conditions.

Maximize clearance, minimize collision
The full AIO setup fits in small CT-bores and reduces the risk of collision with the gantry.

Immobilize without a base plate
Cushions can be positioned directly on the treatment table without the use of a base plate.
The 2nd generation AIO Solution continues to be available.

The AIO Solution contains a cushion set for each anatomical region.

- Brain, head and neck
- Thorax and abdomen in supine position
- Prone breast position
- Belly and pelvis in supine and in prone position

All cushions are easily positioned on the base plate in an indexed way. The cushions have a color code for easy recognition and fast setup of the system:

- Head supports and knee & leg cushions are in grey
- Thorax/abdomen cushions for supine are in blue
- Breast in prone position cushions are in yellow
- Belly/pelvis cushions are in green

The extra-cranial cushions can be adapted in width to accommodate all patient sizes. The prone breast cushions can be adapted in height.

Each patient position is reproduced and immobilized by means of an Efficast thermoplastic mask that limits movement of the anatomical area of concern.

The AIO Solution is truly an All-In-One system with a head and neck immobilization system, lung board, breast board, abdominal system and belly- and pelvic board in one single product.
AIO CUSHION SETS

BREAST AND LUNG BOARD

The blue cushion set is designed to achieve a comfortable and reproducible supine position of the patient. This position is primarily used for the treatment of malignancies in the thorax and the abdomen. The set consists of wedges, with different angles to increase patient comfort, and arm rests to allow for a comfortable, but reproducible positioning of the arms above the head and out of the treatment fields. Hand grips and head supports will further help in increasing the precision and in finding the correct patient position.

FEATURES AND BENEFITS

5°, 10° and 15° angled wedges lift the upper body of the patients and thereby facilitate breathing.

The coating of the cushions prevents the patient from sliding down.

The armrests (20° and 30° angle) have a flat top to support the total upper arm. This increases the patient’s comfort.

Lateral inserts in the cushions allow the positioning of large patients.

Specially developed Efficast masks are used in combination with this set to increase the precision of the treatment. They effectively immobilize the patient in the treated areas by reducing translational and rotational movements.

The indexed head supports position the head in a reproducible way and function as an outstanding reference point for the exact position of the rest of the body.
PRONE BREAST BOARD SOLUTION

The yellow cushion set is designed to obtain a comfortable and reproducible patient position for the “prone breast” treatment technique. This technique keeps the ipsi-lateral breast away from the chest wall and the underlying tissues and reduces the lung, heart and contra-lateral breast tissue volume that is trapped in the treatment fields.

FEATURES AND BENEFITS

The support wedge on the tunnel plate helps in limiting the volume of the sternum and contra-lateral breast tissue that will be caught in the radiation fields. The use of the elevation cushion increases the total height of the set to 23 cm which allows the treatment of very large pendulous breasts.

The slope in the head cushion allows the arms to drop and thereby reduce the tension in the shoulders during longer imaging and treatment sessions to increase the patient’s comfort.

Lateral inserts in the cushions are used for large patients.

Specially developed Efficast masks increase the precision of the treatment. They effectively immobilize the patient in the treated areas by reducing translational and rotational movements.

The head can be positioned by means of two types of head supports:
- A soft head support in the form of a ring that allows for a comfortable positioning of the head in prone position or sideways.
- A support that fixes the head rigidly in prone position. This support can be adjusted to fit the anatomy of the patient’s face.
AIO CUSHION SETS

BELLY AND PELVIC BOARD

The purpose of the belly board is to keep the intestines of the patient out of the radiation fields for treating malignancies in the pelvis area. The opening in the cushion is meant to accommodate the belly of the patient and thereby effectively separate the small bowels from the area to be treated.

FEATURES AND BENEFITS

The opening in the belly board can be fitted with three sizes of belly inserts for different sized patients. These inserts are made of a soft foam to increase comfort in the rib cage area.

Lateral inserts in the cushions allow the positioning of large patients.

The head part of the cushion is designed to drop the shoulders of the patient and reduce stress. The hands of the patient can be placed under the base plate with the use of 2 hand grips.

The head can be positioned by means of two types of head supports:
- A soft head support in the form of a ring that allows for a comfortable positioning of the head in prone position or sideways.
- A support that fixes the head rigidly in prone position. This support can be adjusted to fit the anatomy of the patient’s face.

Pelvicast thermoplastic masks are used to reduce the translational and rotational movements of the patients. A specially designed Leg Separator can be inserted after the patient has mounted the cushion, to fix a 6-points Pelvicast mask.

This type of mask will further increase the reproducibility and precision of the treatment.

KNEE AND LEG POSITIONING SET

An exact and comfortable position of the patient’s legs is obtained by using the indexable knee and leg positioning set.

FEATURES AND BENEFITS

An elevated position of the legs reduces stress in the patient’s back during the daily treatment fractions.

Can be used as a knee support in supine and as an ankle support in prone treatment position.

These cushions are also used as a reference point for setting up the other AIO Solution cushion sets.

The position of the cushion is easily reproduced by means of the centimeter scale and letter combinations.
AIO ANTIBACTERIAL MASKS

AIO BASE PLATES

The AIO “long board” base plates ensure a reproducible positioning of all body regions. The base plates remain on the treatment couch - irrespective of the type of radiation treatment - or simulation couch throughout the day.

The AIO carbon fiber laminate base plate is made of a low density carbon fiber laminate sandwich structure with excellent dosimetric properties. It can be extended over the edge of the couch when using IMRT techniques for a 360° free gantry rotation space around the head and neck area.

FEATURES AND BENEFITS

The plate is color marked for easy and fast setup for the different cushion sets.

Indexing bars can be fitted for indexing vacuum cushions and alpha cradles.

The mask fixation slots (for Effi cast masks) are identical as in all other High Precision Base Plates, assuring complete compatibility between all Orfit products.

AIO HEAD SUPPORTS, BLOCKS AND WEDGES

The main goal in the positioning of patients with head and neck tumors is a very precise and reproducible positioning and immobilization of the head and upper torso of the patient. To achieve this, a combination of the AIO hardware and Efficast thermoplastic masks provides an ideal solution.

The AIO base plate allows for a reproducible and comfortable positioning of the patient, reducing stress and anxiety.

Efficast 3-points masks assure a precise immobilization of the head and 5-points masks of the head, neck and shoulders.

The AIO Storage Cabinet has 5 vertical sliding panels, and can store a complete AIO cushion set, as well as all fixation devices and an AIO board. The panels slide out completely, allowing easy access to the cushions. The cabinet is designed to efficiently store the AIO Solution components in the simulation or treatment room while taking up limited space [width x depth x height = 1600 x 690 x 1980 mm].

Every AIO part has its own dedicated place so that it can easily be found. This reduces patient setup time and makes inventory control easy in the event of misplaced parts.

The cabinet is made of laminated pressed wood boards, which are easy to clean. It is easy to assemble, but at the same time sturdy to make it long-lasting. The cushions are stored in such a way that they remain well protected from possible damage.

Positioning plate for prone head support
The Pelvicast High Precision Frameless Mask System for pelvis and abdomen immobilization consists of a unique combination of three carefully designed and engineered components.

1. Raycast carbon fiber low density hardware.
2. Pelvicast frameless thermoplastic masks.
3. Easy to insert and remove L-shaped profiles as interface between mask and base plate.

When integrated they result in the most accurate, reproducible and comfortable patient immobilization and positioning system.

Orfit has developed a pelvis and abdomen frameless, multi-point masking system that offers the precision in patient immobilization needed with today’s technology to perform IMRT, IGRT, SRS, and SRT.

**CLINICAL STUDY**

FEATURES AND BENEFITS

Thermoplastic with engineered limited shrinkage that results in a high but comfortable degree of patient immobilization.

Very stable mask limits patient movement and rotation.

Memory effect allows the user to re-mold a finished mask as needed. This provides significant flexibility for modification during a patient treatment or simply to save on waste.

Quick release system allows fast and safe removal with high risk patients.

Innovative integrated L-Profiles enable you to quickly and easily secure the mask to the Pelvicast Base Plate for a precise immobilization.
Orfit’s lightweight, professionally designed and precisely engineered hardware ensures outstanding patient immobilization results.

The Orfit Base Plate design consists of a sandwich construction, with a foam core and ultra thin carbon fiber layer.

This results in very low density with the highest possible radiation transmission during treatment.

The use of your existing 2-pin lock bar, Orfit Loxon clamps or a similar device ensures that the Orfit High Precision Base Plate is securely mounted to the table top.

Positioning indicators on the base plate help to reduce patient setup time and ensure precise positioning and immobilization during each fraction.

Orfit High Precision Base Plates are available and compatible for use with all treatment machines, CT and Simulator table tops.

Pelvicast thermoplastic masks reduce the translational and rotational movements of the patients. A specially designed Leg Separator can be inserted into the base plate after the patient has mounted the cushion, to fix a 6-points Pelvicast mask. This type of mask will increase the reproducibility and precision of the immobilization. An extensive range of Pelvicast masks are available to meet specific patient requirements and your immobilization preferences.
ACCESSORIES

LEG SEPARATORS

Leg separator
Contains slots for 6-points Pelvicast masks

Art. N° 32008
Low leg separator for less voluminous patients
Contains slots for 6-points Pelvicast masks
The Orfit Lung Board has a unique and innovative feature with its T-shaped hand grip that is adjustable in height. This feature increases patient comfort and positioning reproducibility.

The arms can be easily extended above the head for treatments in the thorax and lung area. The hand grip can also be moved in inferior and superior direction and locks once in place.
HIGH PRECISION LUNG BOARD

The lung board can be combined with the standard Orfit High Precision Head Supports with cranial stop, Silverman Head Supports and Timo Head Supports (with the use of an adapter).

Art. N° 29115
For patients receiving multiple radiation therapy treatments, position reproducibility is critical. MammoRx patient positioning products help you to quickly setup patients during simulation and to easily reproduce settings during subsequent treatments.

MAMMORX® PATIENT POSITIONING SYSTEMS

Accurately establish and reproduce patient positions in breast radiation therapy.
The MammoRx Carbon Fiber Breast Board provides a solution that meets and exceeds the changing needs of radiation therapists.

The system delivers precise immobilization for IMRT, enhanced setup reproducibility and is compatible with Orfit thermoplastic masks.

**FEATURES AND BENEFITS**

Provide easy and effective reproduction of patient setup.

Enhance patient comfort through next-generation design improvements.

Thin, strong and light system.

Feature low attenuation levels.
**MAMMORX® BREAST BOARD**

The MammoRx Carbon Fiber Breast Board is specifically designed for narrow-bore CT SIM environments. As one of the most lightweight boards on the market, the MammoRx Breast Board is easy to lift and replace on the treatment table - a key benefit when you consider how often therapists remove patient positioning boards each day.

Built-in supports allow you to quickly achieve standard treatment angles of 0, 5, 7.5, 10, 12.5, 15, 17.5, 20 and 22.5 degrees.

**FEATURES AND BENEFITS**

- Fits through most small-bore CT units.
- No metal components in CT scan areas.
- Enables single-side and bilateral patient immobilization.
- Single-handed trigger action enables quick and easy movement of the upper-arm support between four standard settings, providing faster setup times for patients.

The hand support can be indexed in ten indexing holes. It allows a more comfortable and stable positioning.

A plunger locks the angle support ladder in place. This prevents dislocking of the angle support and eliminates the risk of tilt-board collapse.

Can be combined with Orfit thermoplastic masks for increased precision.

The Adjustable Arm Support allows positioning of the arms of the patient extended above the head. For maximal patient comfort the arm support can be adjusted in height. The cup swivels to obtain a comfortable position for each patient. The support is constructed from MRI compatible materials.

The fixed grip pole is designed to be combined with the Adjustable Arm Support. When adjusting the height of the arm support, the hands of the patient can easily slide over the grip pole to find the most comfortable position for the patient.

Used with the MammoRx Breast Board, the bottom stop eliminates patient slippage during treatment. The bottom stop is attached to a 2-pin indexing bar on the treatment couch. There are eight different positions for the 2-pin bar.

The adjustable hand support allows adjusting the position of the patient’s wrists and hands in a vertical direction. The cup swivels to obtain a comfortable position for each patient. This product is an alternative to the fixed grip pole.
**ACCESSORIES**

Constructed from resilient ABS material, the BASS Board provides strength and integrity in a lightweight package. Ideal for supporting the patient’s arms during treatment and diagnostic procedures of the breast, thorax and upper abdomen. The BASS Board also provides indexing capabilities for our standard head support options.

The knobs allow the attachment of a head base plate to the MammoRx Breast Board. The knobs have to be combined with an adapter plate 32063 that is attached to a small head base plate 32130.
A blue gel ring head support or a round head cup can be attached directly to the MammoRx.

Interfaces are available for the Orfit High Precision Head Supports, Silverman and Timo Head Supports.

Radiation therapy of breast cancer in prone position is an increasingly used treatment technique. Several publications, also recent ones, prove the dosimetrical advantage of this technique. When treating a patient in the prone position the heart and lung tissue and the contra-lateral breast will be less affected.

SAGITTILT®
PRONE BREAST SOLUTION

Developed in collaboration with the University Hospital of Liège, Belgium [Prof. P. Coucke]
CLINICAL STUDIES

“Prone treatment resulted in: improved dose coverage, better homogeneity, less volumes of over-dosage, reduced acute skin desquamation, a 3-fold decrease of moist desquamation, lower incidence of dermatitis, edema, pruritus, and pain. 2- to 4-fold reduction of grades 2-3 toxicity, lower ipsilateral lung and mean LAD dose.”

Stegman, L.D. et al. (2007), Long-Term Clinical outcomes of whole-breast irradiation delivered in the prone position, Int. J. Radiation Oncology Biol. Phys., Vol. 68, No 1, p. 73-81

“Prone position breast radiation results in similar long-term disease control with a favourable toxicity profile compared with standard supine tangents. The anatomic advantages of prone positioning may contribute to improving the therapeutic ratio of post-lumpectomy radiation by improving dose homogeneity and minimizing incidental cardiac and lung dose.”

“This technique for whole breast radiotherapy is feasible and enables an accelerated regimen in the prone position while sparing the lung and heart.”

“Irradiation of the heart, lungs, chest wall and contralateral breast are minimized with this technique. Prone position breast irradiation appears to be a simple and effective alternative to irradiation of the breast in the conventional supine position when the supine position is likely to result in unacceptable dose inhomogeneity or significant doses to normal tissue.”

“The prone position has been shown to reduce skin reactions by eliminating skin folds.” “This position can reduce late toxicities by greatly reducing the amount of dose to critical organs.” “Dose homogeneity can be improved up to 1.2%.” “The prone position also has shown reduced intrafractional motion while having interfractional motion within tolerance.”
Treatment of the breast with the patient in prone position is perceived by many to be less comfortable and also less reproducible than the supine position. The Sagittilt Prone Breast Solution solves these issues.

When developing the Sagittilt we looked at those aspects that make the supine breast position comfortable and translated that into a prone immobilization device.
SAGITTILT®
FEATURES AND BENEFITS

TILTING OF THE PATIENT

Sagittilt has a mechanism that allows to rotate a patient along the sagittal axis in a reproducible and safe way. This rotation makes the breast hang further away from heart and lung and at the same time it decreases pressure on the ribs and the contralateral breast to improve the comfort.

The advantage of tilting the entire length of the body along the sagittal axis is that it remains flat on the device. The patient can be tilted from 0° to 10° with increments of 1 degree. One person only can perform the tilt.
SAGITTILT® FEATURES AND BENEFITS

HIGH REPRODUCIBILITY OF PATIENT POSITION

Sagittilt allows for an optimal reproducibility of the position of a patient by means of supports for the arms, hands, elbows, head and feet that are individually adjustable and indexed, which creates a comfortable, stable and reproducible position for the patient.

The patient’s elbows are positioned in a cup shaped support structure, similar to what is used in supine breast boards. Once the elbows are positioned on the Sagittilt, the position of the shoulders will also be reproducible for each session and the upper body will remain still during treatment.
IMMOBILIZATION WITH A THERMOPLASTIC MASK

A dedicated thermoplastic mask (Art. N° 33774/2MA/12MI+N) for the Sagittilt immobilizes the hips of the patient and keeps the patient in place in a secure way when tilting the system.

Both the thermoplastic mask and the elbow support prevent the patient from sliding sideways when using the tilt function. There are three different positions for the thermoplastic mask: cranial, middle and caudal.

The mask is locked into the board by using two High Precision profiles, which is a patented technology by Orfit.
**SAGITTILT® FEATURES AND BENEFITS**

**EASY STORAGE**

A smartly designed storage cart comes with each Sagittilt so that the system can be moved around effortlessly and placed on the treatment couch without performing heavy lifting.

**COUCH INDEXATION**

The Sagittilt Prone Breast Solution is attached to the simulation and treatment couch by means of two dedicated 2-pin indexing bars, allowing to place it in a reproducible and safe way on most of the couch tops that are in use.
SAGITTILT®
FEATURES AND BENEFITS

HIGH-TECH DESIGN PRODUCT

Sagittilt is the result of an innovative development process and a high-tech production method involving carbon fiber techniques from the aviation industry.

Special attention was given to the design of the product with the purpose of making it patient and user friendly while taking up a minimum amount of space in a treatment or simulation room.

Sanitary cover for Sagittilt forehead support (package of 50 pieces)
The SBRT Solution is developed in collaboration with users worldwide based on existing SBRT studies, products available on the market and on-site testing to provide a system which combines high technology, ease of use and precision to meet current and future demands.

The SBRT Solution provides a precise, stable and easy to use setup that allows to apply the most effective radiation treatment method for thoracic and abdominal tumors. The SBRT Solution is MR safe.
SBRT SOLUTION
FEATURES AND BENEFITS

Various configurations of the product are available to adapt it to your needs.

- SBRT Long Base Plate vs SBRT Short Base Plate
- Arm setup with cushions vs MammoRx arm supports
- Mechanical vs pneumatic abdominal compression system
SBRT SOLUTION
FEATURES AND BENEFITS

POSITIONING OF THE ARMS

MammoRx arm setup
The MammoRx arm supports and hand grips are compatible with the SBRT Solution.
SBRT SOLUTION
FEATURES AND BENEFITS

POSITIONING OF THE ARMS

Support cushion arm setup
Another option to position the arms is the use of a cushion. The arm rest cushion can be lifted with the use of an elevation cushion. There is a cranial and a caudal position for these cushions. Various indexed positions are available for the hand grips for optimal comfort and reproducibility.
SBRT SOLUTION
FEATURES AND BENEFITS

POSITIONING OF KNEES AND FEET

Longitudinal indexing of the knee support cushion.

Longitudinal indexing of the feet support cushion.

The knee and feet supports are indexed on top of the long base plate.

When using the short base plate, the knee and feet supports are attached to the treatment couch with a 2-pin indexing bar.
ABDOMINAL COMPRESSION SYSTEMS

Mechanical pressure system
The mechanical pressure system consists of a bridge with a pressure plate and a screw. There is a low and a high version of the bridge. The position of the bridge can be adjusted in the longitudinal and vertical direction.
Pneumatic pressure belt system
Abdominal compression can also be created with a pressure belt with inflatable air bladder. The pressure belt is available in two different sizes: 120 cm (Art. N° 32317/9) and 130 cm (Art. N° 32317/18) long.
SBRT SOLUTION
FEATURES AND BENEFITS

VACUUM BAG

Various sizes of vacuum bags can be indexed both on the SBRT Long and the Short Base Plate.

Note: when using a vacuum bag, blocks will need to be placed underneath the head support to elevate the head of the patient.
SBRT SOLUTION
FEATURES AND BENEFITS

COMPATIBILITY WITH THE AIO SOLUTION

The long SBRT base plate can be combined with two sets of The AIO Solution:
> The Breast- and Lung Board Solution
> The Belly- and Pelvic Board Solution (except the Leg Separator)
Slots are provided over the entire length of the long base plate to allow the use of different thermoplastic masks.

Orfit offers a complete immobilization solution, specifically designed for fixation of extremities in a reproducible way.

The system consists of a low density carbon fiber base plate with a leg support, two comfort cushions and dedicated masks. The base plate can be indexed to any couch top on 2-pin bars and has multiple holes to offer a maximum of possibilities for positioning and immobilizing both upper and lower extremities.

When using the leg support, one leg can be lifted and placed out of the treatment field. Masks can be made on the leg support as well as on the base plate itself. Foam cushions are placed under the knee and heel to provide patient comfort. Upper extremities can be immobilized while the patient is lying on the couch, or sitting next to it. In both cases, masks are made over the elbow and hand to obtain an immobilization with excellent reproducibility. Comfort cushions are used under the elbow and the hand for patient comfort.

- Moldcare
- Bolus material
- Cyberknife full body cushion
- Comfort cushions
- Water bath
- Digital dry-heat convection oven
- Cleaning products
- Storage solutions
- Fixation devices
The combination of Orfit Vacuum Bag Cushions and Efficast High Precision Frameless masks enables you to achieve a highly customized immobilization of your patient with high precision, excellent reproducibility and great comfort for the patient.

The Orfit Vacuum Bags are more narrow and longer than conventional vacuum bags. This ensures a much more intimate contouring to the patient’s anatomy. The head and neck bags are designed for specific use in combination with the Orfit 3D shaped Head Supports and the Orfit Hybrid masks to offer an unsurpassed high precision immobilization that limits patient movement to 1.5 mm and less.

The half body bags for adults and the pediatric bags have a narrow shape to easily fit on the All-in-One and SBRT base plate in combination with an Efficast thermoplastic mask.

The Orfit Vacuum Bags are made from radio-translucent materials that will provide artefact free image clarity with minimal beam attenuation.

A special coated nylon bag material in combination with the thin fill helps to ensure intimate mold definition.

The bags are easy to clean and are designed to withstand the rough handling conditions of a busy radiation oncology department.

A molded Orfit Vacuum Bag will maintain its integrity during the course of treatment (up to six weeks), which ensures precise and reproducible patient positioning from imaging through the entire treatment process.

The Orfit vac bags are compatible for use with CT, MRI (when used with Orfit MRI compatible base plates), PET/CT, SPECT and Ultrasound imaging modalities.

The Orfit Vacuum Bag Cushion (VBC) System includes the following immobilization/positioning applications:

- Custom individual patient head support: The small size Orfit bag (Art. N° 18055) when used in combination with the Orfit 3D Head Support enables you to create a custom head support mold that eliminates all gaps in the neck area while providing unmatched patient comfort.

- Custom thoracic immobilization/positioning: The half-body Orfit bag (Art. N° 18056) is perfect when you need to create a customized thoracic immobilization. The half-body bag is compatible for use with the Orfit All-in-One Base Plate and SBRT Base Plates.

- Custom pediatric CNS immobilization/positioning: The pediatric full body Orfit bag (Art. N° 18057) is designed specifically for CNS treatment.

**BOLUS MATERIAL**

The thermoplastic bolus material, which is available in sheets and pellets, is a specially formulated, rigid thermoplastic with a low melting temperature. It is very easy to mold and can be placed on thermoplastic masks. After heating, it also sticks to itself, which makes it possible to make thicker bolus sheets if needed.

The full body cushion for the Cyberknife Couch Top is designed for spinal and thorax treatment. The patient is positioned supine on the cushion with the arms along the side of the body.

Due to the narrow width of the cushion, the arms will be positioned next to the cushion on the treatment table, instead of on top of the cushion.

This allows the use of lateral fields to radiate the spine and thorax without the arms being located in the treatment field.

ACCESSORIES

WATER BATH

(NOT AVAILABLE IN NORTH AMERICA)

FEATURES AND BENEFITS

Extra-large to fit every size of mask (inner dimensions: 74cm x 54.5cm x 9.5cm).

A grill to lift the mask out of the water without putting your hands in the water.

A built-in thermometer [°C and °F] that indicates when the water has reached the target temperature.

A built-in timer.

Easy to empty with a tap on the side.

Available in 115V and 230V.

Art. N° 35097/RE
Cleaning product for water bath
500 ml
WATER BATHS

(ONLY AVAILABLE IN NORTH AMERICA)

FEATURES AND BENEFITS

Art. No. 35098/L
Digital stainless steel water bath - extra large
> Interior dimensions: 26” (L) x 22” (W) x 5” (H).
> Extra large tank handles the largest size thermoplastic masks and sheets.
> Overall dimensions: 33”(L) x 26”(W) x 8” (H).
> Digital control ensures precise water bath temperatures within ±1 degree.
> Hinged lid opening in four positions.
> Bright LED display - easy to use.

Art. No. 35098
Stainless steel water bath - large: analog controls
> Interior dimensions: 24 1/2” (L) x 18 1/2” (W) x 5” (H).
> Accommodates large size thermoplastic masks and sheets.
> Overall dimensions: 28 1/2” (L) x 21” (W) x 7” (H).
> Hinged stainless steel split-lid is designed to open completely or to one side with one hand leaving the other hand free.
> Dual high/low thermostatic temperature controls.
ACCESSORIES

DIGITAL DRY-HEAT CONVECTION OVEN

[NOT AVAILABLE IN NORTH AMERICA]

FEATURES AND BENEFITS

Two large grid platforms for heating multiple masks at the same time.

All sizes of Orfit masks fit in the oven, including the largest head, neck and shoulders masks and extra-cranial masks (inner dimensions: 700 x 570 x 240 mm)

Multi-functional digital touch screen with build-in timer.

DIGITAL DRY-HEAT CONVECTION OVEN

(ONLY AVAILABLE IN NORTH AMERICA)

FEATURES AND BENEFITS

The Dry Oven is ready for use within a few minutes of starting the heating cycle.

The Dry Oven uses a highly accurate Digital temperature controller. The controller incorporates set point and process temperature displays. The temperature can be adjusted between 150°F and 180°F.

The drawer incorporates a non-stick support rack sized to accept 5-points head, neck and shoulder masks.

## DOSIMETRIC CHART

### THERMOPLASTIC MASK MATERIALS

| Product reference | Measured values |  
|-------------------|------------------|---
|                   | Density (g/cm³)  | Absorption Factor (AF%) (± 0,15%) 6MV (%) | Skin build-up (mm H₂O equiv.) (± 0,1 mm) |
| Efficast 1.6 mm micro | 1,13 | 0,40 | 0,20 | 1,70 |
| Efficast 2 mm maxi | 1,13 | 0,40 | 0,20 | 1,70 |
| Efficast 2 mm micro | 1,13 | 0,45 | 0,25 | 2,20 |
| Efficast 2.4 mm maxi | 1,13 | 0,50 | 0,35 | 2,30 |
| Efficast 3.2 mm maxi | 1,13 | 0,70 | 0,45 | 2,90 |
| Nanor 1.2 mm micro+ | 1,17 | 0,32 | 0,25 | 1,20 |
| Nanor 1.6 mm micro+ | 1,17 | 0,46 | 0,32 | 1,60 |
| U-Plast 1.6 mm micro | 1,13 | 0,40 | 0,20 | 1,70 |
| U-Plast 2 mm maxi | 1,13 | 0,40 | 0,20 | 1,70 |
| U-Plast 2.4 mm maxi | 1,13 | 0,50 | 0,35 | 2,30 |
| U-Plast 3.2 mm maxi | 1,13 | 0,70 | 0,45 | 2,90 |
| Hybrid (Efficast 2MA, Orfilight 16MI) | NA | 0,65 | 0,45 | 3,00 |
| Hybrid (Efficast 16MI, Nanor 12MI+) | NA | 0,54 | 0,34 | 2,10 |
| Bolus (per mm of material) | 1,13 | 0,28 | 0,20 | 1,30 |
| HP L-Shaped profiles [ABS] | 1,13 | 0,73 | 0,53 | 2,40 |

Note: Use these numbers as a guidance only. Perform the measurements again in your department to verify these results.
